■■ Audixa — Final 100% Milestone Implementation Plan

Target: Production-Grade Speech Studio & Final Evaluation | **Stack:** Faster-Whisper, WaveSurfer.js, Flask, SQLite, ReportLab

1. Executive Summary & Complete Milestone Evolution

Audixa has evolved from an initial concept into a full-featured speech-to-text intelligence studio. Below is the multi-phase milestone progression from initial scaffolding to complete 100% production readiness:

Milestone Phase	Status	Key Features & Deliverables
Phase 1 (30% Milestone)	■ **COMPLETED**	Custom flat UI tokens, initial 2-page layout grids, basic SQLite schema, WaveSurfer.js audio player foundation.
Phase 2 (60% Milestone)	■ **COMPLETED**	Live local Faster-Whisper AI engine, multi-core CPU threading, synchronized 3-panel playback, active highlight, auto-scroll, in-line editing, pause-gap auto-chapters, 6 export formats, and decluttered UI.
Phase 3 (100% Final)	■ **ACTIVE BUILD**	**25+ Multilingual Engine** (Indian regional + global), **Speech-to-English translation**, **Dark/Light theme switcher** (Warm Sage & Midnight Moss), **Waveform Chapter Pins**, **Speaker Diarization Tagging**, **Speech Metrics (WPM)**, **Session History Drawer**, and **PDF Export**.

2. Key Suggestions & Feature Enhancements for 100% Completion

To elevate Audixa to a commercial-grade, award-winning application, the following strategic enhancements form the core of the 100% implementation:

- **25+ Language Multilingual Expansion:** Native support for Indian regional languages (Hindi, Bengali, Marathi, Telugu, Tamil, Gujarati, Urdu, Kannada, Malayalam, Punjabi) and international languages with auto-detection confidence scoring.
- **AI Speech-to-English Translation (task='translate'):** Transcribes foreign speech directly into fluent English subtitles, unlocking cross-lingual podcasts and international lectures.
- **Best UI/UX Design System (Day/Night Modes):** Smooth transition between Warm Sage Light Mode and Midnight Moss Dark Mode with CSS custom properties.
- **Waveform Chapter Visual Pins:** Proportional chapter divider lines rendered right over the WaveSurfer audio timeline for visual scrubbing.
- **Speaker Diarization & Attribution:** Segment labeling with customizable speaker tags (e.g., Speaker A, Speaker B, Host, Guest) and distinctive pastel badges.
- **Live Speech Metrics:** Real-time analytics bar displaying Total Word Count, Speaking Rate in Words Per Minute (WPM), and Estimated Reading Time.
- **History Session Drawer:** Sliding sidebar allowing users to browse, search, and reload previous audio sessions stored in SQLite.
- **Interactive Keyboard Shortcuts Modal:** Power-user hotkeys for playback, seeking, and quick-saving with on-screen modal help.
- **Publication-Quality PDF Export:** Beautifully typeset PDF documents containing timestamps, speaker tags, and chapter summaries.

3. Multilingual Speech Engine Architecture (25+ Languages)

The multilingual engine categorizes supported languages into organized dropdown groups for intuitive selection, coupled with Whisper's direct translation pipeline:

Category	Languages Supported	Engine Implementation & Script
Auto-Detect & Mixed	Auto-detect (Hinglish, Multilingual Code-switching)	Whisper language=None mode with phonetic token language identification.
Indian Regional	Hindi, Bengali, Marathi, Telugu, Tamil, Gujarati, Urdu, Kannada, Malayalam, Punjabi	Native Devanagari, Bengali, Dravidian, and Perso-Arabic script vocabularies.

Global International	English, Spanish, French, German, Japanese, Chinese (Mandarin), Russian, Portuguese, Italian, Arabic, Korean, Dutch, Turkish, Vietnamese	High-accuracy multilingual vocabulary with native character tokenization.
Translation Mode	Any foreign language → English	Whisper task='translate' pipeline generates English subtitles directly from audio.

4. Best-in-Class UI/UX & Synchronized Studio Specifications

Audixa 100% adopts a refined, distraction-free design architecture with dual themes and rich micro-interactions:

UI Component	100% Final Enhancements & Technical Design
Theme Engine (Day & Night)	• **Warm Sage Light Mode:** #F8F6EB (Linen background), #758359 (Olive actions), #242D1C (Forest text). • **Midnight Moss Dark Mode:** #131710 (Deep dark canvas), #1E2519 (Panel cards), #C6D99E (Mint highlights). • Instant theme switching with zero layout shift via CSS custom property overrides.
Waveform & Chapter Visual Pins	• WaveSurfer v7 high-resolution audio waveform with responsive canvas resizing. • **Chapter Timeline Pins:** Proportional markers placed along the waveform bar matching chapter start times. • Clicking any marker seeks audio to that exact moment and triggers smooth auto-scroll.
Interactive Transcript & Speaker Tags	• **Active Segment Highlight:** Real-time CSS transition on the active dialogue card. • **Speaker Attribution:** Customizable dropdown/badge on each segment (Speaker 1, Speaker 2, Host, Guest). • **In-Line Editing:** Editable contenteditable text fields with manual or debounced background save. • **Speech Analytics:** Real-time display of WPM, total word count, and reading time.
Session History & Keyboard Shortcuts	• **History Drawer:** Sliding side-panel allowing users to inspect past audio transcripts without leaving the page. • **Hotkeys Sheet Modal:** Space (Play/Pause), J/L (Seek +/-5s), Ctrl+S (Save), / (Search), ? (Shortcuts sheet).

5. Complete Multi-Format Export Engine (7 Formats)

Audixa supports direct one-click exports covering media editing, publishing, video descriptions, and academic reporting:

Export Format	Ext	Structure & Standard	Primary Workflow
Plain Text	.txt	Clean transcript with speaker names and timestamps.	Notes, study guides, articles.
SubRip Subtitles	.srt	Numbered subtitle intervals with comma ms timestamps.	Premiere, DaVinci, Final Cut.
WebVTT Subtitles	.vtt	HTML5 video caption standard with dot ms timestamps.	Web players, YouTube, Vimeo.
YouTube Chapters	.txt	Description-ready timestamp list (00:00 Intro\n01:15 Topic).	YouTube video descriptions.
Markdown Summary	.md	Formatted markdown with metadata, chapters, and quotes.	GitHub, Notion, Obsidian.
Structured JSON	.json	Full data schema with segment boundaries and speakers.	Downstream APIs and search indexes.
Typeset PDF Report	.pdf	Formal multi-page document with headers, chapters, and text.	Academic submissions, executive briefs.

6. Database Architecture & REST Endpoints

Audixa utilizes SQLite (audixa.db) with scoped unique IDs (f'{transcript_id}_{raw_id}') and cascading foreign keys across transcripts, segments, and chapters tables. The REST API covers upload, streaming, editing, history, and exports.

Method	Endpoint	Description & Output Schema
POST	/upload	Multipart upload supporting language_mode, model_size, and translate_mode.
GET	/transcript/<id>	Returns metadata, segments list with speaker tags, chapters, and audio URL.
POST	/save_transcript/<id>	Saves edited segment text, timestamps, and speaker labels.
POST	/save_chapters/<id>	Saves updated chapter titles and boundaries.
GET	/api/export/<id>/<fmt>	Direct download for txt, srt, vtt, youtube, md, json, or pdf formats.
GET	/api/history	Fetches historical transcript records for session drawer.
POST	/api/delete/<id>	Deletes transcript record and purges audio file from disk.
GET	/plan-100.pdf	Direct download of this 100% Milestone Implementation Plan PDF.

7. Step-by-Step Execution Plan for 100% Completion

- **Step 1 (Speech Engine):** Update transcriber.py to support 25+ language codes, task='translate' for English translation, and model precision toggle.
- **Step 2 (Database Updates):** Update db.py to store speaker attribution and language detection metadata.
- **Step 3 (Theme Engine & Styles):** Update styles.css with Midnight Moss Dark Mode variables, smooth toggle transitions, and chapter pin styling.
- **Step 4 (Upload Hub UX):** Update index.html with organized language optgroups, translation switch, and model precision dropdown.
- **Step 5 (Studio Editor Features):** Implement waveform chapter visual pins, speaker attribution badges, WPM analytics bar, history drawer, and keyboard shortcuts modal in editor.html and editor.js.
- **Step 6 (Export & PDF Engine):** Add PDF export handler in app.py and expose in export dropdown.
- **Step 7 (QA & Packaging):** Run automated test suite, rebuild clean zip distribution, and verify live server.

8. Viva & Faculty Review Q&A; Guide (100% Final Review)

Q1: What sets Audixa apart from standard transcription software?
A: Audixa provides a simultaneous 3-panel synchronized studio combining WaveSurfer waveform audio scrubbing, live dialogue highlighting, in-line editing, automatic pause-gap chapter detection, speaker attribution tagging, and multi-format exports including subtitles and PDF reports.

Q2: How is the multilingual and translation pipeline achieved?
A: Using faster-whisper with CTranslate2 and int8 quantization. The model supports 99 languages. When task='translate' is enabled, the neural acoustic model transcribes non-English speech directly into English text, eliminating the need for an external translation API.

Q3: How does the application maintain fast performance on local hardware?
A: By leveraging multi-threaded CPU parallelization across all 12 hardware threads, greedy 1-beam decoding, int8 quantization, Silero VAD silence filtering, and background model pre-warming.
